Hi,

Glad to provide assistance.

Have a good day!

Best regards,

Vincent Xu

WOW!! I would have never figured that out. That fixed it.

Further info: the Local Service account permission that you identified

was

being lost when we joined a PC to the domain. We had to use a computer group policy to correct the problem.

Thank you very much!

Hi,

Go to the following registry key:

HKLM\SYSTEM\CurrentControlSet\Control\SecurePipeServers\Winreg

Check if the Local Service account have Query Value,
Enumerate Subkeys,
Notify, and Read Control allowed permission.

Thanks.

Best regards,

Vincent Xu

microsoft.public.windowsxp.security_admin

Thanks for suggestion. I
confirmed that is "remote
registry" service

is

already running on all the
WinXP SP2 PCs. So that is
not the problem.
Further thoughts?

Hi,

From your
description,
it appears
that the
"remote
registry"
service

is

not
running.

Please run
"services.msc"
and find
"remote
resigry"
service to
start
it.

Then, check
this issue
again.
