Pretend you see a popup that says to send me 50 bucks.  
Never, ever... ever buy anything you find from a popup ad if you lack the ability to research before you buy.

A few months ago i downloaded and installed a program suggested to me by a pop-up window. Ever since then i have noticed decreased performance on my pc.  
I have run spyware/adware checks using adaware scanner aswell as the scanners provided by my IP. However, i still cannot improve the performance of my pc,  
and everytime i re-scan my pc new spyware is found. Can anyone help?  
Thanks
