Here is one more:

<http://www.microsoft.com/technet/prodtechnol/winxppro/maintain/filessharing.msp>

If you click the path link at the top of the page, it is a light purple color, you will be taken to the home page of this section and can access more information. You can do the same on the last link I provided as well. It will take you to the Home and Small Business Networking site on Microsoft. Good luck and have a great day. Please let me know how things work out for you.

Thanks,

Hi again, here is another article you may find useful:

<http://www.microsoft.com/windowsxp/using/networking/security/permissions.msp>

Hope this helps,

Good morning Mike, I need some clarification on the OSs you are using on your workgroup. Are you using Home, Pro, or Media or a mixture of some of these?

How the permissions apply by default is determined by which version(s) you are using, and in particular which your son is using. For example: If you son

## RE: Remote Access

is using Home, then Simple File Sharing is the only choice on how files are shared on his computer and how he connects to other shares. Now, I am not sure how it works if there is a mixture of OS(s) on a workgroup network. As I wrote on my posts I am not yet an expert, but learning rapidly. I think if there is a Home OS on a Workgroup, that Simple File Sharing has to be used as this is the only File Sharing Home can do, NTFS permissions are disabled by default. You could, conceivably, attain NTFS File Permissions on a Home OS,
