Hi Malke, first of all pc was riddle with spyware so i scan with Ad-Aware(se) fixed 25 registry keys+ , then i done one more with (Spy Emergency 2006) witch found (11/315) infections, then i done Antiviris scan with AVG(se)free and found one Trojon, everyting was grand till i done a recovery repair it stop halfway tru and look for (icwconn1.ex)(icwconn2.ex) there was about 30 of them files missing but on advise of earlier post from "googling it" they said they were just back up files, so i updated my system from ms.update everything was fine till i tried to acess my firewall and you know the rest.. please help.....Thanks blaster !

Your post is extremely difficult to read. Since the computer was full of malware, I suggest you back up your data and do a clean install of Windows. You might want to try a Repair Install first but in most cases that won't be useful.
