Windows Firewall can only be disabled, not uninstalled.

| Seasons greetings. I want to install Comodo Firewall on my computer and
| would like to know the correct method of uninstalling windows firewall. I
| tried the other day by going to control panel>windows firewall and
| disabling
| it there and then checked the security centre only to find it was still
| on. I
| was able to turn that off but re-enabled it in case there was other
| settings
| that needed to be changed. I've had a stop error [blue screen] before when
| in
| my ignorance I tried to install K-Firewall without first uninstalling
| windows
firewall so now I err on the side of caution. Thanks

.
