my notebook is broken the hd it is working as I can do for recovering my data in the briefcase of administrator (with Password) connecting the hard disk to another computer?  
if it is possible : in Italian language thanks

I'm sorry but I don't speak Italian. You may want to post in one of the Italian newsgroups instead. Here is a list of all the MS newsgroups; scroll down to the Italian ones:

Yes, you can pull the hard drive and retrieve the data from it. You can slave it in a computer running a working install of XP. Since you would need an IDE-to-laptop drive adapter, it is much easier to use a usb/firewire external drive enclosure. Use the working Windows Explorer to copy the data to the rescue system's hard drive and then burn the data to cd or dvd.
