What is the specific problem with the built-in Administrator account?

For tips on creating an effective newsgroup post, please see: <http://www.dts-l.org/goodpost.htm>

I had a problem with my Administrator account logon. I used the steps from a help site to change the BIOS password, and to get to the SVPW utility to change the Supervisor Password. The problem is: now that I have logons/Passwords that I know, I still don't have a working Administrator account that I can use to give Administrator privileges to my Limited Account. So I still can't change settings, install programs, or troubleshoot wireless problems. I'm not able to set up a new Administrator account either. I'm running in circles. Can Anybody give me a path to follow? This is for a Toshiba P105-S6084 w/ Windows XP Media Center.
Thanks for any direction you can give,
