That sounds really scary! I do know exactly what keys need to be changed as the install lists those that fail. (Is this like safe-mode? I found instructions for installing the s/w in that mode on HP but no mention that this would help my problem). Guess I could try Bart's. Thanks.

"Doug Knox - [MS-MVP]" wrote:

No, there are some registry keys that an Administrator can't even look at. You could try a Bart's PE CD. This creates a bootable "mini" version of Windows where you can run REGEDIT and bypass the permissions to make changes. But you would have to know the exact key that needs to be changed.

Thanks. I looked on web site as you suggested and did not see a patch specifically for this error and those listed were from 2006. The CD that I can purchase is also old- 4/2006 -which would be the version I have - I think - as I just purchased this scanner. I kind of thought that, since I can't look at the permission on any key using regedit ,that I somehow have messed up something else having to do

Check on HP's web site for a newer version of ImageZone.
And specifically
look for a patch for it that addresses this specific issue.

Install of HP Image zone s/w cannot create
registry values (from user
and
adm
acct)and when I use regedit (from adm)to try
to change the permissions
I
get
the msg "unable to display security
information"
...on Dell 6000 using XP home edition
installed 12/2005. Have used a
registry tool to do a cleanup and that did not
show a problem. Ran
dcomcnfg
as suggested by HP forum but could not see
a problem
