I do not know for sure, but if you include the filename it will probably not work correctly.

Try it and find out.

Hi thanks for your response, but I am trying to avoid letting all .exe files through. All we need not to prompt is the sbbwin.exe. When specifying just this file will it block the rest?
Is this the best way to specify a file that you do not want to be prompted with the warning for?

"Wesley Vogel" wrote:

It wants the file type, just the extension with a leading period, not the filename.

Use just .exe

When you double click on Inclusion list for low file types and Enable it, you get...

Specify low risk extensions (include a leading period, e.g. .bmp; gif;).

Inclusion list for low file types

[[This policy setting allows you to configure the list of low risk file types. If the attachment is in the list of low risk file types, Windows will not prompt the user before accessing the file, regardless of the

Re: Inclusion List

file's zone information. This inclusion list overrides the list of high risk file types built into Windows and has a lower precedence than the High or Medium risk inclusion lists (where an extension is listed in more than one inclusion list.)

If you enable this policy setting you can specify file types which pose a low risk.

If you disable this policy setting Windows uses its default trust logic.

If you do not configure this policy setting Windows uses its default trust logic.]]

When modifying this GPO. User
Configuration>Administrative
Templates>Windows Components>Attachment Manager.
Inclusion list for low
file types.
I set this to enabled and specified one file that is in use
company
wide. For example sbbwin.exe. Does this only let sbbwin.exe
be
executed with out the prompt? Or is it ignoring the SBBWIN
and
allowing any EXE to be launched without prompting?
Thank you
