Hello,

I have a folder with hundreds of files in it. I encrypted all of them with EFS. Now I need to add someone to the decryption list, so they can also open the files, but I can't find a way to select Multiple files to change that add that user, OR even better, to add that user to the list of who can decrypt the file on a folder level.

On the folder level the details for encryption are grayed out.

Any tips are appreciated.

Thanks

Give him the certificates disk? Sort of defeats the purpose though.
