Hi,

Open Run -> msconfig.exe and check if in Startup tab on program list is your file. If is check entry name and will opportunity to uncheck from autostart.

Sometimes when I shut down my machine, I see a program names gOoxl(long hex #).exe being 'ended' and I suspect it's a virus, but when I run virus scan or adaware, it's not detected. Is there anyway for me to get more info on this rouge program and delete?

Thanks,
Tony
