When I turned my computer on this morning I had recieved a notification stating that my Virus Protection has been turned off. When I checked this in the security centre, I could confirmed that it was turned off, however I need to know how to turn it back on. I am using Symantec Virus Protection.

Open the Symantec console and see if you can turn it on there.
If that doesn't load, go to services.msc (start \run) and make sure the requisite services are started.

.
