I know how to restrict access to folders on a drive. But can an entire physical HDD drive be restricted to a few users without needing to secure each folder on it.

One of my users asked and I got curious. She is running Windows XP SP2

Yes.

NTFS (file and folder permissions) allows this.

I don't recommend messing with a System/Boot drive – but with a data drive – it would work fine; as long as the people you are trying to restrict are **not** administrators.
