Some progress... the hotkey part was solved by starting a process in the logon desktop session. But how do you refresh the logon screen?

Is there a function in winlogon or logonui that I can call? It seems like msgina would need an interface to refresh the screen.

Interesting... I don't need to change the authentication mechanism so maybe (hopefully) I won't have to write a custom gina.dll...

Is it possible to listen for a hotkey on the Windows Logon screen? It doesn't have to display a UI, I just need to respond to the hotkey and refresh the screen.

Or what's your idea on displaying a startup-dialog to a fixed
