Hello,

I have recently done some cleaning up of a laptop that was full of viruses, malware, spyware, you name it. Everything runs as advertised after I ignore a Run DLL error that pops up on start up. Here is the error, "Error loading C:\WINDOWS\system32\bxljvcyd.dll". I ran loaded my registry cleaner program on it and it did not fix this. I believe what has happened is the .dll is part of a virus or malware program that was not completely removed. I have the recovery disk for this laptop an it appears the only way I can do an OS repair is if I do a complete restore, which I am trying to avoid. Has anyone seen this before? TIA...

Bill Beshlian

Download and run this program from Microsoft.

AutoRuns for Windows v9.0

<http://technet.microsoft.com/en-us/sysinternals/bb963902.aspx>

Look on the Everything page for an entry that includes bxljvcyd.dll in the Image Path column.

Remove the check mark from the box next to this entry.

Close Autoruns.

Restart your computer to make sure the error message is no longer displayed.

You can go back to Autoruns and delete the entry if successful.

Just to be on the safe side, you might consider taking steps to make sure your system is virus free. Here's a site with general instructions on cleaning a computer.
