| Hello,

|

| I have F-prot version 6 (Anti-Virus) loaded on several Windows XP
| systems in our lab. The Windows XP systems have been configured for
| security auditing (per NISPOM Ch. 8 requirement). Using event viewer
| to look at the security logs, I'm seeing 8500+ security messages for
| two days worth of usage, of which 94% of them read exactly like the
| printout below.

|

| I'm not sure, but it seems like FPAVserv (f-prot process) might
| running with the user's rights and not running as a system service.

|

| Any thoughts on how I can fix this?

|

| Thanks,

|

< snip >

Interesting.

If you have to follow "NISPOM Ch. 8 requirement", you can't use F-Prot. It is an unapproved anti virus solution.

The requirements are only for the DISA approved anti virus solutions under the DISA DoD wide license which include only; Trend Micro, Symantec and McAfee.
