You should not have more than one anti-virus program running at the same time.

I have Spybot Search and Destroy , Windows Defender on my PC and they seem to do a good job although I find Defender abit difficult to understand at times with whether I should be Permitting or Denying some changes :-/ I use to use AVG free then changed to Avast (which picked up virus and spyware that AVG did not).Now after reading some veivs in here I have got Panda 2008 on my system , it also picked up Bugs that Avast did not..but my system is seeming slower than before...what to do?? Im thinking of starting XP from scratch (what a headache) or trying a different lot of Anti virus etc all together--Avira--Kasperksy--CA--Avast--AVG--never ending list it seems :-).Then its back to trial and error...Or maybe its New PC time :-/
