Request if you can share stepwise procedure to compile this exe.

This is a good start, but it doesn't stop Alt-Print Screen. Also, if Task Manager is used to end the process, Print Screen works again.

Can the script be altered to prevent one of both of these workarounds?

Got it, you just set another hot key for Alt-PrintScreen as well.

The script can be compiled into an exe file that can be launched with the user's login script. As long as the program is running, PrintScreen and Alt-PrintScreen will do nothing. The program will show up on the Task Manager list, so you should name it something that blends in, like svchost.exe. Not perfect, but a step in the right direction.

Code:

```
-----  
Opt("TrayIconHide",1)  
  
HotKeySet("{PRINTSCREEN}", "DisablePrintScreen")  
HotKeySet("!{PRINTSCREEN}", "DisablePrintScreen")  
  
While 1  
WEnd  
  
Func DisablePrintScreen()  
EndFunc  
-----
```
