Hello,

I apologize for my previous post about Vigenere++...my network security professor asked me to post my algorithm in here to get some expert feedback, and I've done it without reading the newsgroup for a while. I've only read the FAQ, and tried to describe the algorithm as accurately as possible (as suggested)...but I ended up being too boring and school-teacher like. I thought there was also a lot of newbies (like me) in here...but after reading threads such as "sci.crypt sandbox" I've understood the situation (BTW I think Michael Brown's idea is good). Anyway, if someone wants to spend a few minutes to make a crypto-newbie grow up a bit, I'll appreciate any comment on Vigenere++. If you need source code to better evaluate my work, I'll put them online as soon as possible.

Thank you  
Stephen Cantini

PS: Thanks to Tom St Denis for not flaming me immediately! :-)
