I learned that there is a new invention of directing sound as a focused beam to a target:

<http://www.popsci.com/popsci/science/article/0.12543.351353.00.html>

It seems that it could have some quite real, though apparently limited, usages for secure communication via voice.

According to the article: 'Step into the beam and you hear the sound as if it were being generated inside your head'. So it's sort of compromising one's consciousness.
