

Self Decrypting Archive Freeware?

Source: <http://www.derkeiler.com/Newsgroups/sci.crypt/2005-04/2027.html>

I'd like to keep some files on my computer, but make it hard for a casual hacker to get at them. Don't need national security...just something better than plain text.

I looked at several encryption programs. They all said, "unencrypt your files and reencrypt them with this new version. This implies that I'd be up the creek if I couldn't figure out which program and version I used to encrypt.

What I'd like is an archive that can be unencrypted...no matter what. The obvious solution is to make a self-decrypting archive that is independent of OS or application version.

Does such a freeware application exist?

Thanks, mike
