I do not know a solution where analysis of the decryption process does not make it clear that there could be a second sense to the message.

François Grien

Thanks François,

I would think it would extremely hard to make it look like there was just one message, since you would generate the second plain text message to fit what you would get decrypting the cyper text with the second key.

I like the idea of compressing the data, What about also adding bit's of psudo-random data in as well....
