lines of proprietary YieldBook C source.

! The user is still here (voicemail answers).

! Sent to themselves, or a relative, into a college campus.

! This source is very Salomon-specific, and could not be useful
! to transmit offsite for "testing".

! It executes other programs in the YieldBook package tree, and
! needs a full setup of YieldBook to operate.

!

! Shall I do the secondary searches and an incident report?

***** end excerpt from 'Corruption at Salomon Brothers' *****

Nothing was done: I had completely overwhelmed Salomon Legal with security incidents, and many were ignored.

In general, when you catch something in the backups, there are two choices:

- o Grin and bear it
- o File criminal or civil charges in court

Two of the security incidents found in the backups qualified for criminal prosecution.

One was a source for the Finance Desk Trading System [FDTS].

Vivian,

On Jan 26 1996:

18,184 lines of C++ source of something called "basis" for FDTS.

Here was the radar hit:

Filename: Jan_26_96/dfAA05811 Size: 207496, Dated: Jan 26 08:30
Sender: apoo@snowball (Art Poo)
Recipient: NAME@xxxxxxxxxxxxx
**** UUencoding, Filename='b.Z'

Your Excellency,

Make this floppy-bound. Bring it to esi this evening.
Thank you.

.

i am thus wild, so I demolish you
