It can be applied to controlling people in a society.

Cybernetic control of society.

The 'arousal filter' Stafford Beer and his cyberneticians set up was effectively keyword monitoring of traffic.

When you use keywords to either select or exclude traffic, each step is a 'filter' step. If you make it past all the filters, a human then reviews the results to see if it calls for action. "arousal filter"

Mr. Beer was trying to help the economy by massive real-time monitoring of factories and companies and banks, and thus help the people of Chile.

- \*
- \* Twenty-four hours a day, messages were flowing in non-stop. This instantly
- \* posed an enormous problem in handling the inundation of information.
- \*
- \* Two of the senior cyberneticians organized a filtration system.

The feedback was not simply machine throughput rates, but also—via the central computer—a system 'through which anyone could consult anyone else'.

I used keyword monitoring to filter "information" from "noise" in Salomon's HUGE email traffic. What I did, of course, was small potatoes; what Stafford Beer did was a serious cybernetic attempt to control an entire nation's economy.

In order for him to do that, he needed to set up a (cybernetic) monitoring infrastructure.

The nation's banks, factories and industrial companies.

It would have given Allende maximum control over the nations industrial infrastructure, real-time monitoring of everything.

Re: Re: don't try to restore hourly while you're documenting via a favourite frame

Everything had a computer monitoring it.
